STEP 1
What is the plant / process? Preventing the spread of infection by blood and body fluids.

STEP 2
What are the hazards that may arise? Biological infection.

STEP 3/4
What things increase the risk of the hazard? Can the risk arising from the hazard be reduced? Broken skin – entry points to new hosts (open wounds, broken skin, mucous membranes).

STEP 5
What pre-requisite safety measures should be in place?
1. Use disposable gloves, safety glasses and disposable mask during procedures that are likely to generate droplets of blood or body fluids
2. Use disposable gowns, gloves, mask and safety glasses during procedures that are likely to generate splashes of blood or other body fluids

STEP 6
What is the safe working procedure?
1. Wash hands before applying gloves.
2. Administer procedure.
3. Remove gloves, gowns, mask and glasses.
4. Wash hands and lower arms immediately after gloves are removed.
5. Wash hands and other skin surfaces thoroughly if contact is made with skin.
6. Dispose of gloves, gowns and mask in disposable plastic bag.
7. Place bag in appropriate bin.
8. If glasses come in contact with blood or body fluid, mix a separate diluted bleach solution (bleach: water: 1:10) and dunk glasses in solution.
9. Otherwise wash glasses in soapy water.
10. Rinse glasses and allow to dry

STEP 7
What is the risk level? Low Moderate Substantial High Very high
